

Unpack

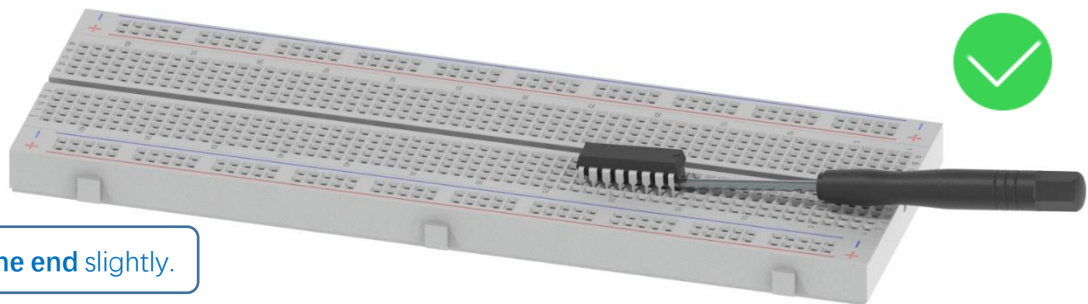

Parts are crowded in the box to avoid swaying.

Open the box and you can take them out. Refer to "PartsList.jpg" for full parts list.

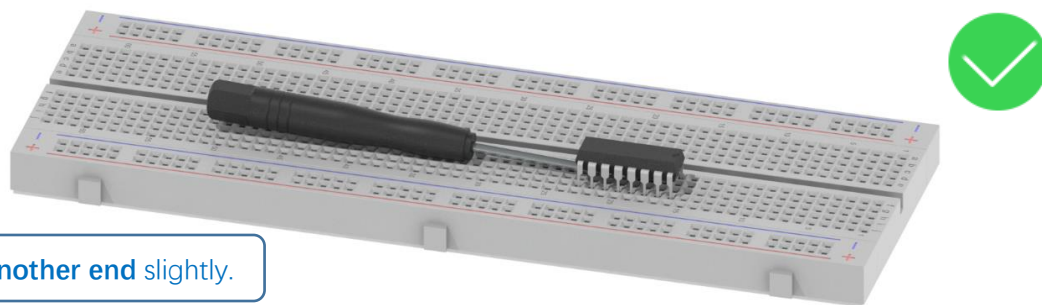

If the pins of any part are bent, simply straighten them for normal use.

Some chips and modules are inserted on the breadboard to protect their pins.

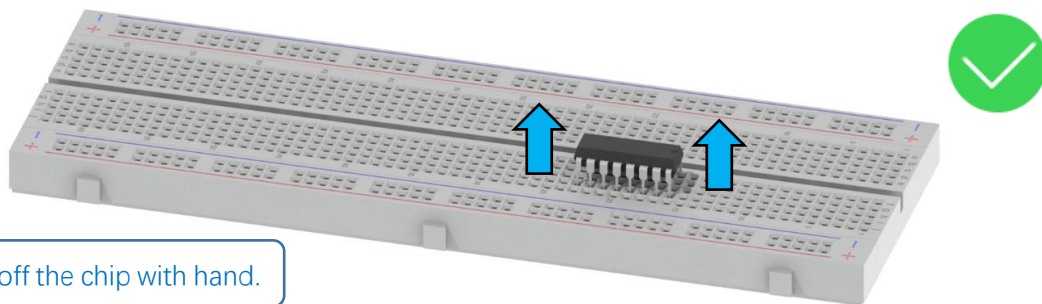

Please find a tool (like a little screwdriver) to remove them like below:

Step 1, lift **one end** slightly.

Step 2, lift **another end** slightly.

Step 3, take off the chip with hand.

Avoid lifting one end with big angle directly.
